

## Homework 1. revise

- Algorithm - the instruction to follow the task  
Turing Machine - a rule to do step by step and how to update value  
Correctness - make sure that the algorithm is give the correct answer  
Running time - the elementary operation that the algorithm takes

### 2. • Algorithm Linear\_mul

Input: array  $a[0 \dots m-1]$   
begin  
     $s \leftarrow 1$   
    for  $i \leftarrow 0$  step  $i \leftarrow i+1$  until  $m-1$  do  
         $s \leftarrow s * a[i]$   
    end for  
    return  $s$   
end

size  $n = m$   
 $T(n) = n$

### • Algorithm Quad\_mul

Input: array  $a[0 \dots 2m-1]$   
begin  
     $s \leftarrow 1$   
    for  $i \leftarrow 0$  step  $i \leftarrow i+1$  until  $m$  do  
        for  $j \leftarrow 0$  step  $j \leftarrow j+1$  until  $m-1$  do  
             $s \leftarrow s * a[i+j]$   
        end for  
    end for  
    return  $s$   
end

size  $n = 2m$   
 $T(n) = m+1(m) = m^2 + m$   
 $= \frac{n^2}{4} + \frac{n}{2}$

### • Algorithm Cube\_runtime

Input: array  $a[0 \dots 2m-1]$   
begin  
     $s \leftarrow 1$   
    for  $i \leftarrow 0$  step  $i \leftarrow i+1$  until  $m-1$  do  
        for  $j \leftarrow 0$  step  $j \leftarrow j+1$  until  $m-1$  do  
             $s \leftarrow s * a[i+j]$   
            for  $k \leftarrow 1$  step  $k \leftarrow k+1$  until  $m$  do  
                 $s \leftarrow s + a[k]$   
            end for  
        end for  
    end for  
    return  $s$   
end

size  $n = 2m$   
 $T(n) = m \times m \times m = m^3$   
 $= \frac{n^3}{8}$

3.

**algorithm** fastSums

**Input:** array  $a[0..2m-1]$

**begin**

array  $s[0..m]$

$s[0] \leftarrow 0$

**for**  $j \leftarrow 0$  **to**  $m-1$  **do**

$s[0] \leftarrow s[0] + a[j]$

**end for**

**for**  $i \leftarrow 1$  **to**  $m$  **do**

$s[i] \leftarrow s[i-1] + a[i+m-1] - a[i-1]$

**end for**

**return**  $s$ ;

**end**

the size of input is  $2m$

start with  $s[0] = 0$

1<sup>st</sup> loop : then  $s[0] = a[0] + a[1] + a[2] + \dots + a[m-1]$

2<sup>nd</sup> loop :  $s[1] = s[0] + a[m] - a[0]$  ( $s[1] = a[1] + a[2] + \dots + a[m]$ )

$s[2] = s[1] + a[m+1] - a[1]$  ( $s[2] = a[2] + a[3] + \dots + a[m+1]$ )

:

$s[i] = s[i-1] + a[i+m-1] - a[i-1]$

then  $s[i+1] = s[i] + a[i+m] - a[i]$  ~~7X~~
